

Find Wireless Internet Hot-Spots wherever you roam..

Wifi-Boost manufactures a product that RV Internet users have been waiting for: a long-range WiFi booster antenna that can connect with wireless Internet Hot Spots up to 5 miles away in open country: a laptop computer is limited to a few hundred feet. Wifi-Boost is very simple to use because it has smart software that searches for Internet Hot Spots and makes connecting easy.

The WIFI-BOOST is fixed to the side of your parked RV or truck with a suction cup provided so that the antenna is above the height of the vehicle. The cable is plugged into your computer Ethernet connector.

WIFI-BOOST is so powerful and easy to use because it is loaded with software that makes it easy to connect to hot spots. Open your computer browser page and type in **<http://wifi-boost.com>** to access the software.

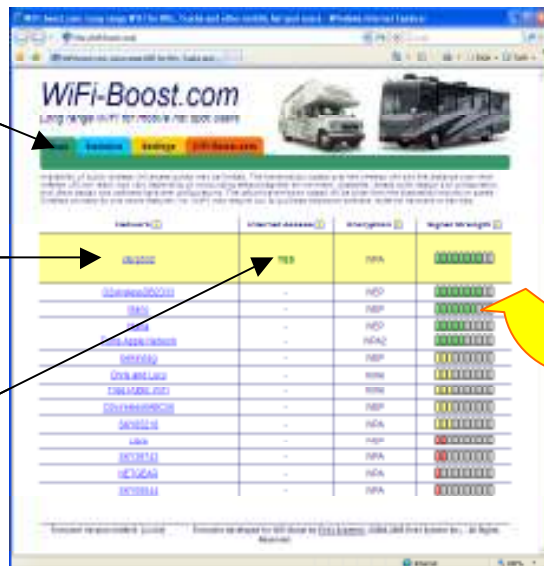

WIFI-BOOST is simple to use. Everything you need is included with the kit: WIFI-BOOST unit, two data cables, power connector, a cigar lighter power cord and even a power adapter for 110volts. WIFI-BOOST is connected to your computer as shown.

WIFI-BOOST has a bonus feature: you can connect more than one computer using a switch so several people can surf the Internet together.
